Wide Area Surveillance: Real-time Motion Detection Systems: 6 (Augmented Vision and Reality)

Wide Area Surveillance: Real-time Motion Detection Systems: 6 (Augmented Vision and Reality)

The book describes a system for visual surveillance using intelligent cameras. The camera uses robust techniques for detecting and tracking moving objects. The real time capture of the objects is then stored in the database. The tracking data stored in the database is analysed to study the camera view, detect and track objects, and study object behavior. These set of models provide a robust framework for coordinating the tracking of objects between overlapping and non-overlapping cameras, and recording the activity of objects detected by the system.
