In the United States, psychologists are in the process of adapting to the World Health Organization's International Classification of Diseases (ICD), the 10th edition of which was recently integrated — with clinical modifications (ICD-10-CM) — into the U.S. healthcare system. This transition also affects graduate students, interns, and trainees in psychology who are just learning the basics of assessment and diagnosis, as well as their instructors who may be adjusting to this new diagnostic system. This easy-to-read guide — optimized for implementation in the classroom — teaches students a straightforward conceptual framework for assessment and diagnosis with the ICD-10-CM as its foundation.
